Herkimer Industries Brightens Workplace for the Town of Herkimer

Things are literally looking brighter at Town of Herkimer facilities, thanks to a lighting project designed and supplied by Herkimer Industries.

The lighting products are part of Herkimer Industries' full line of LED lighting solutions for commercial and industrial applications from interior LED tubes to outdoor architectural lighting. HI, located in Herkimer, NY, is the industrial contracting division of Arc Herkimer.

The LED Interior and Exterior Lighting Retrofit Upgrade Project at the Town of Herkimer's Garage and Water Tower perimeter involved switching from fluorescent and mercury vapor lights to a "green" alternative: LED lighting technology. Herkimer Industries supplied wall packs, architectural flood lighting, LED fluorescent replacement kits, and high bay lighting.

The project also helped to employ three local people with disabilities, who are part of an integrated workforce at HI and who assisted with testing and packaging the lights.

Suzanne Bakiewicz, national business development director, said, "This project was a win-win for the Town of Herkimer, taxpayers, and Herkimer Industries. Not only did it provide employment opportunities, but the project improves exterior visibility and security, enhances the employee work environment with improved illumination, and reduces overall wattage and energy consumption and costs."

Town of Herkimer Supervisor Dominic Frank said, "The lighting project at the Town of Herkimer's Highway Garage and storage facility created improved working conditions for the Highway Department both in terms of supplying enhanced lighting in all areas of the facilities and creating a safer and more secure work

Town of Herkimer Highway Superintendent Dave McManus, Town Supervisor Dominic Frank, and Herkimer Industries' National Business Development Director Suzanne Bakiewicz review the town garage's lighting project, designed and supplied by Herkimer Industries, which enhances working conditions, visibility, and security.

environment. This project was a part of the Town Board's 2016 effort to make improvements at all of the Town's facilities. Working with the Herkimer Industries team was great as they quickly understood our goals and how to meet them in the most cost efficient manner possible both in terms of the installation and the long-term operation of the lighting system. They designed a customized LED lighting system for us that we are sure will serve the Highway Department for the long term."

Herkimer Industries not only provides lighting solutions, the industrial division provides contract packaging, industrial sewing solutions, package and product design services including prototyping, sub-manufacturing and assembly solutions, ISO compliant quality assurance, and worldwide distribution. HI offers a full line of safety products, including law enforcement and military supplies, which can be customized to meet customers' needs. For more information regarding partnering with Herkimer Industries, contact Bakiewicz at (315) 574-7633 or visit www.herkimerindustries.com.
